Multiple Sclerosis

What is Multiple Sclerosis (MS)?

• MS is a disease that causes the immune system to attack the protective coating of the nerves (Mayo Clinic).
• This damage interrupts the nerve impulses between the brain and the rest of the body (Mayo Clinic).

Signs and Symptoms

• Some (not all) of the more noticeable signs and symptoms:
  • Numbness or tingling of the body is usually the first sign of MS.
  • Weakness, Dizziness, Vertigo
  • Walking difficulties
  • Vision Problems
  • Pain

Treating Multiple Sclerosis

• There is no cure for MS but there is help to treat the symptoms and reduce activity.
  • Medication is available to relieve some of the pain and symptoms (Mayo Clinic).
  • Rehabilitation is recommended in order to live at the best quality and to help stay mobile and active (Mayo Clinic).
